AFRL exhibit debuts at Space Symposium

COLORADO SPRINGS, Colo. – A new Air Force Research Laboratory corporate exhibit with rear-lit graphics and large plasma screens debuts at the 18th National Space Symposium in Colorado Springs, Colo. During the four-day event held April 8-11, the laboratory used an area 25 feet by 40 feet to feature space-related technologies from its various subordinate units around the country. The symposium was designed to exchange information on space policy, technology and initiatives. Each year, AFRL participates in a half-dozen major exhibits as part of its efforts to keep the general public abreast of Air Force research activities.
